Compunet InfoTech offers  
**Online Solutions**  
that drive architectural efficiency and  
growth for John Clark Architect Inc.

After sharing a professional relationship since the early nineties, Compunet has helped foster a virtual computing environment for John Clark Architect Inc. that saves significant time and money.

John Clark Architect (JCA) is a high tech architectural firm, whose web based office concept is exclusive and continues to evolve. "I've always believed that as technology grows, you have to grow with it" John Clark says. Compunet has been effective in adapting their service offerings to be consistent with industry trends and evolving technology. "That's why I've used them so long," Clark explains, "they're really good at recommending and providing the cutting edge technology." Compunet has an ability to be forward thinking. "Compunet started servicing us as an architecture firm a ways back but every time I've moved, I've brought them with me."

The latest technological innovation that Compunet has facilitated for John Clark is the implementation of a virtual computing environment using an "architect in a box" methodology. Compunet was asked to create the virtual environment for the purpose of reducing traditional office related overhead costs. This would also allow Clark's business to work, seamlessly, with geographically dispersed colleagues on a day to day or project to project basis.

### **The Situation: A Need for a Virtual Environment to Reduce Conventional Office Expenditures**

By centralizing all architectural design and business communication resources in one virtual location, the capacity for collaboration and efficiency was optimized. Clark coins the digital environment a "Virtual Architect" office and claims it has been integral to their professional growth.

Compunet utilized Virtualization, VoIP, SaaS, IaaS, and Compunet Cloudsync technologies to create the Virtual Architect. A dedicated web-based infrastructure, it is available for any given project, resides on a private cloud server and has since had proven success in completing virtually designed projects. Experienced remote team members are available on an as needed basis from around the globe.

JCA is now able to bring in outside consultants from a variety of different places without huge overhead costs. Compunet uses a pre-arranged template to set up 'work stations' for new consultants and contributors, who only get access to what they need to. According to Clark, "Compunet handles it promptly and everything works effectively often within a half hour."

### **The Solution: Trusting Compunet to Create Innovative Solutions for Business Efficiency and Growth**

The advantages to working with Compunet are numerous. JCA finds there is now greater opportunity for expansion to other geographic locations, because their capabilities are no longer regionally focused. They are able to integrate more efficiently with clients and consultants with the systems Compunet have provided. According to Clark "We get great feedback from high-profile, large scale clients." JCA continues to be reliant on Compunet's cutting edge technology and services, such as:

- **Outstanding managed services and computer support** – Compunet install and support the technologies and computer systems that help businesses run efficiently and successfully.
- **Wide-ranging IT solutions** – Compunet enables the client to maximize their technology to get the most out of their IT investment, gain competitive advantages and increase production.
- **Reliable cloud strategy** – Compunet ensures the protection of data and the availability of IT systems for productivity and efficiency around-the-clock

John Clark Architect recommends Compunet to other architectural companies. Clark says that Compunet are "good at researching what technology and products are the best fit for us." Since using Compunet, Clark's business efficiency has increased tremendously. "We couldn't coordinate this much without Compunet solutions – it just wouldn't be possible."

**Compunet offers Vancouver-based IT Consulting and cost-effective Managed IT Services designed to address technology challenges and help you reach your business goals. From network consulting and integration services to onsite and remote computer support, Compunet will assist you in maintaining productivity and efficiency while staying ahead of the competition.**
